Cricket Player Performance Tracking Application : CRICKSTATS

User Story:

As a Salesforce admin, I want to build a comprehensive cricket player performance tracking application within Salesforce to record, organize, and analyze match-by-match performance data of cricket players. This application will include custom objects such as player and match performance, along with well-defined fields and relationships to ensure accurate and consistent data management. By using master-detail relationships, roll-up summary fields, formula fields, and Salesforce flows, the system will automatically calculate player statistics, simplify data management, and generate insightful reports and interactive dashboards. This will help coaches, team managers, and sports analysts monitor player performance, identify performance trends, and make informed decisions for team selection and player development.

1. INTRODUCTION

1.1 Project Overview :

Crickstats is a Salesforce-based player performance management application developed to maintain and analyze cricket players' performance records in a centralized platform. The application stores player details and match performance information through custom objects and connected relationships, making data organized and easy to manage.

The system also uses reports, dashboards, roll-up summary fields, formula fields, and Salesforce flows to automate calculations and present meaningful performance insights. It helps coaches, team managers, analysts, and administrators access accurate player statistics, monitor performance trends, and make informed decisions for team planning and player development

1.2 Purpose :

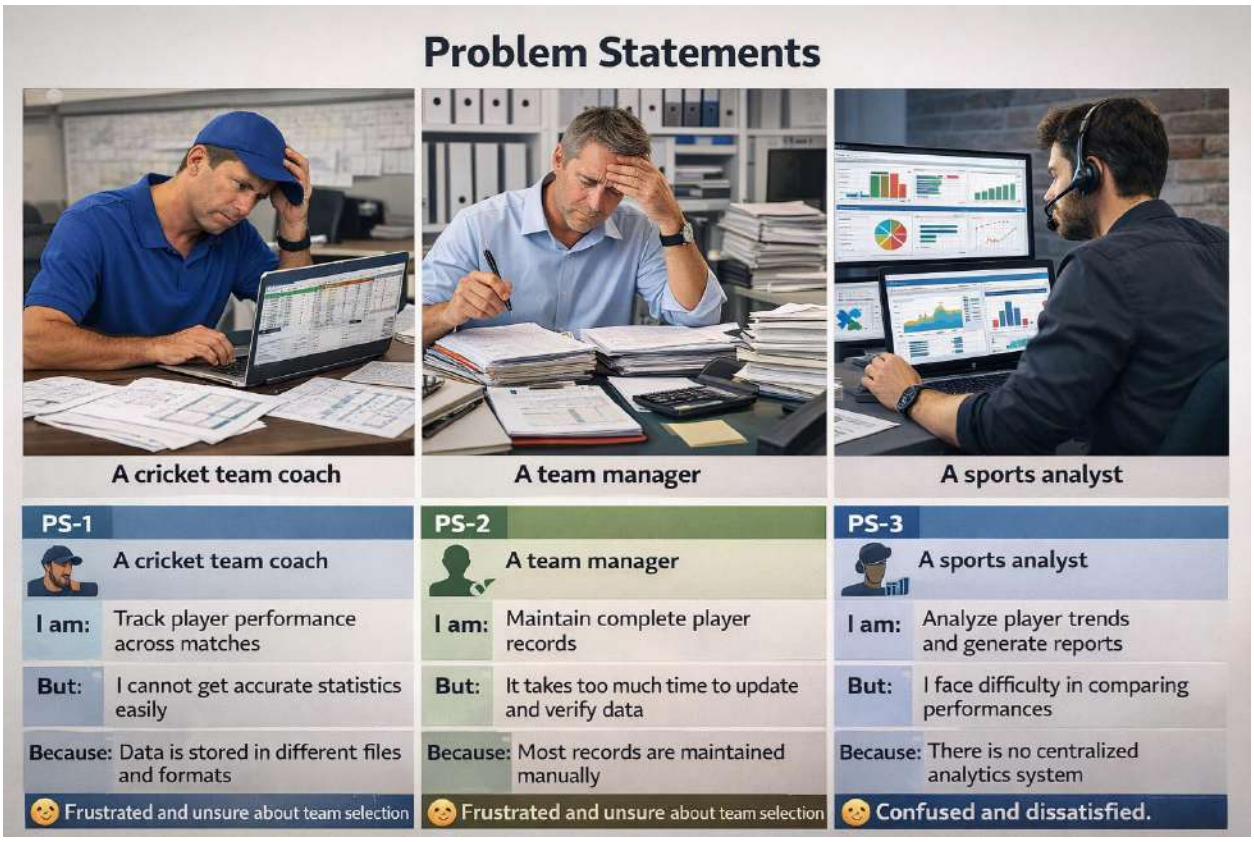

The main purpose of this project is to develop a centralized Salesforce application for managing cricket player performance efficiently. The objectives of the project are:

- ➉ To maintain player and match performance records in a centralized system.
- ➉ To improve the accuracy and accessibility of cricket performance data.
- ➉ To automate player statistics and calculations using Salesforce features.
- ➉ To generate reports and dashboards for real-time performance analysis.
- ➉ To support coaches and managers in player development and team planning.
- ➉ To reduce manual record-keeping and improve overall data management.

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A cricket coach	Monitor player performance after every match	I do not have all player statistics in one place	Performance data is maintained in different records	Uncertain while making team decisions
PS-2	A team administrator	Keep player information updated	Updating records takes a lot of effort	Most information is entered manually	Overloaded and less productive
PS-3	A performance analyst	Evaluate player statistics and identify trends	Comparing performances is difficult	There is no single platform for organized analysis	Unsatisfied with the reporting process

2.2 Empathy Map Canvas

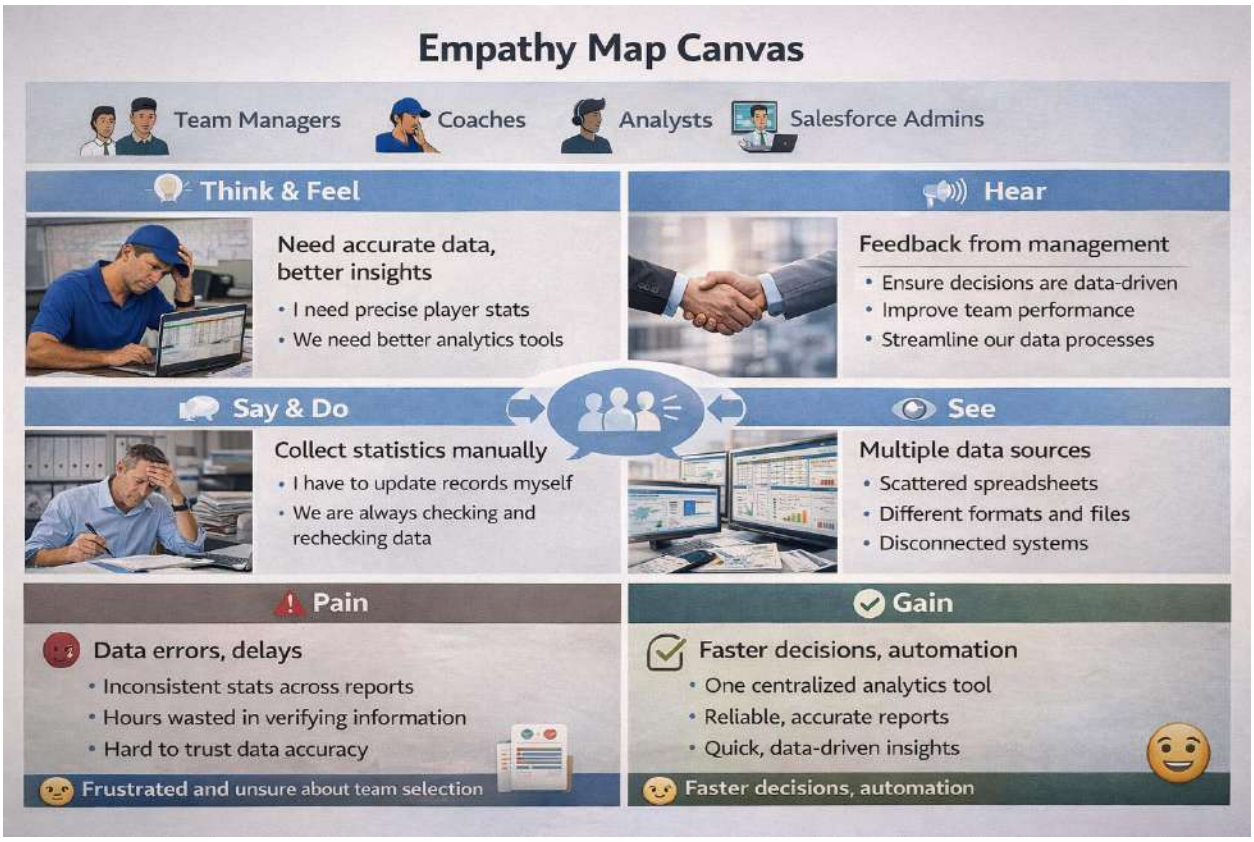

Target Users

- ❿ Team coaches
- ❿ Team administrators
- ❿ Performance analysts
- ❿ Salesforce administrators

Empathy Analysis

Aspect	Description

Think & Feel	**Want reliable player statistics and quick access to performance insights.**
Hear	**Receive feedback from team management and coaching staff.**
See	**Different spreadsheets, scorecards, and scattered performance records.**
Say & Do	**Record match details, update player information, and review performance regularly.**
Pain	**Manual data entry, inconsistent records, and delays in generating reports.**
Gain	**Centralized data management, automated calculations, and faster decision-making.**

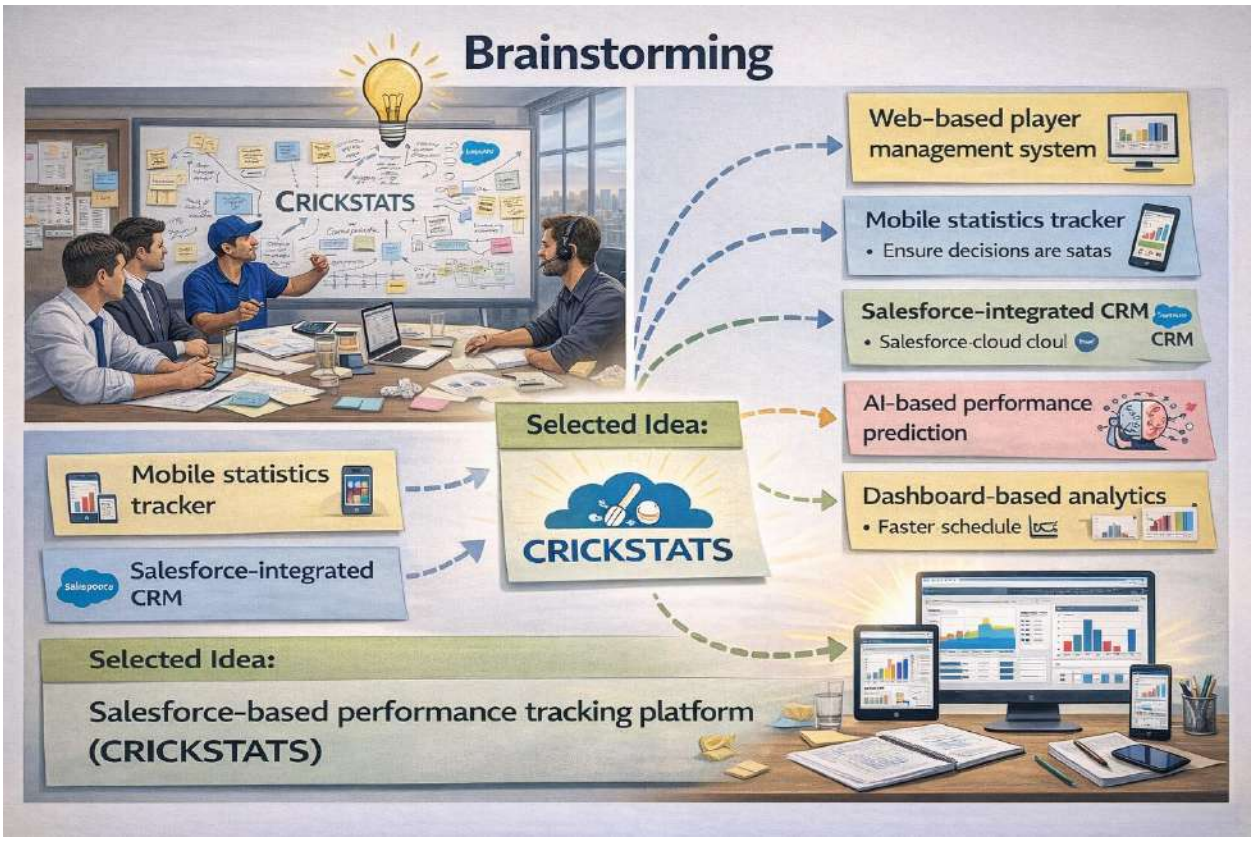

2.3 Brainstorming

Brainstormed Ideas

Brainstormed Ideas

- ❿ Cloud-based cricket player management system
- ❿ Digital match score and performance tracker
- ❿ Salesforce application for player records
- ❿ Automated player statistics calculator
- ❿ Interactive reports and dashboard solution

Selected Idea:
A Salesforce-based cricket player performance management application named Crickstats, which centralizes player records, automates performance calculations, and provides reports and dashboards for effective performance analysis.

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Journey Stages:

- Log in to the crickstats application.
- Register or select a player profile.
- Enter match performance details.
- Save and update player statistics.
- View reports and dashboards.
- Analyze player performance trends.
- Make informed decisions for team selection and player development.

3.2 Solution Requirements

Functional Requirements

FR No	Requirement
FR-1	Player Registration
FR-2	Match Performance Entry
FR-3	Dashboard Generation

FR-4	Generate performance reports
	Automate updates and notifications

Non-Functional Requirements (NFRs) – CRICKSTATS

NFR-1: Usability

The system should provide a user-friendly interface that allows coaches, managers, analysts, and administrators to perform their daily tasks quickly and accurately without requiring extensive technical knowledge.

Requirements

- Easy-to-understand navigation between modules.
- Well-organized dashboards with clear labels and charts.
- Simple forms for entering player and match details.
- Quick access to frequently used features.
- Minimal training required for first-time users

Examples:

A coach can record player performance immediately after a match using a simple form.

- A manager can search and view player records within a few clicks.
- An analyst can access performance statistics through easy-to-read charts and reports.
- An administrator can manage teams and users without navigating through complex menus.

Example: The application uses a clean dashboard, clearly labeled buttons, and simple navigation so users can complete tasks efficiently with minimal learning time.

NFR-2: Security

The system should ensure that player, team, and match information is protected from unauthorized access and data loss while allowing only authorized users to perform specific actions.

Requirements

Role-based access for different users.

- Secure login with user authentication.
- Protected storage for player and match data.
- Regular backup of system data.
- Controlled access to sensitive information.

Examples:

Coaches can view player performance records but cannot change system settings.

- Managers can add and update team and match information.
- Analysts can access statistics and generate performance reports.
- Administrators can manage users, permissions, and system configurations.
- Regular backups help restore data if information is accidentally lost.

Example: The system provides different access levels for coaches, managers, analysts, and administrators to keep confidential information secure while allowing users to perform only their assigned tasks.

NFR-3: Reliability

The system should operate consistently and accurately by ensuring that player, team, and match data is stored correctly and remains available without unexpected failures.

Requirements

Accurate storage of all match and player records.

- Automatic backup of important data.

- Proper error handling during user operations.
- Stable system performance during regular use.
- Reliable recovery from unexpected interruptions.

Example:

If a coach records player performance during a match, the information should remain safe even if the connection is interrupted.

- A manager should be able to continue updating records after the internet connection is restored.
- The system should prevent duplicate or incomplete data entries.
- Backup copies should help restore data if a technical problem occurs

Example: The application maintains accurate records, handles errors properly, and recovers data after interruptions to ensure reliable daily operations.

NFR-4: Performance

The system should deliver fast and consistent performance while processing player, match, and performance data. It should respond quickly to user requests and maintain smooth operation even when multiple users access the system at the same time.

Requirements

Fast page loading

- Quick report generation
- Smooth dashboard rendering
- Minimal response time

Example:

When an analyst generates a performance report for 100+ players, the report should load within 2–3 seconds. The dashboard should display updated player statistics immediately, ensuring a smooth user experience without noticeable delays.

NFR-5: Availability

The system should remain available whenever coaches, managers, analysts, and administrators need to access player and match information. It should provide reliable access with minimal interruptions through cloud-based services.

Requirement:

- 24/7 system availability
- Minimal downtime
- Cloud-based access
- Disaster recovery

Example:

During tournaments, coaches should be able to log in to CRICKSTATS at any time, including nights and weekends, to view player statistics and match data. Cloud hosting and backup mechanisms help keep the system available and support data recovery if an unexpected issue occurs.

NFR-6: Scalability

The system should support a growing number of users, players, teams, and match records without reducing performance. It should expand efficiently as more data and organizations are added to CRICKSTATS.

Requirements

Handle growing datasets

- Support more teams and leagues
- Expand storage capacity
- Maintain performance under load

Example:

If CRICKSTATS expands from managing one team to 50 teams, the system should continue to load player records, generate reports, and display dashboards smoothly without noticeable delays.

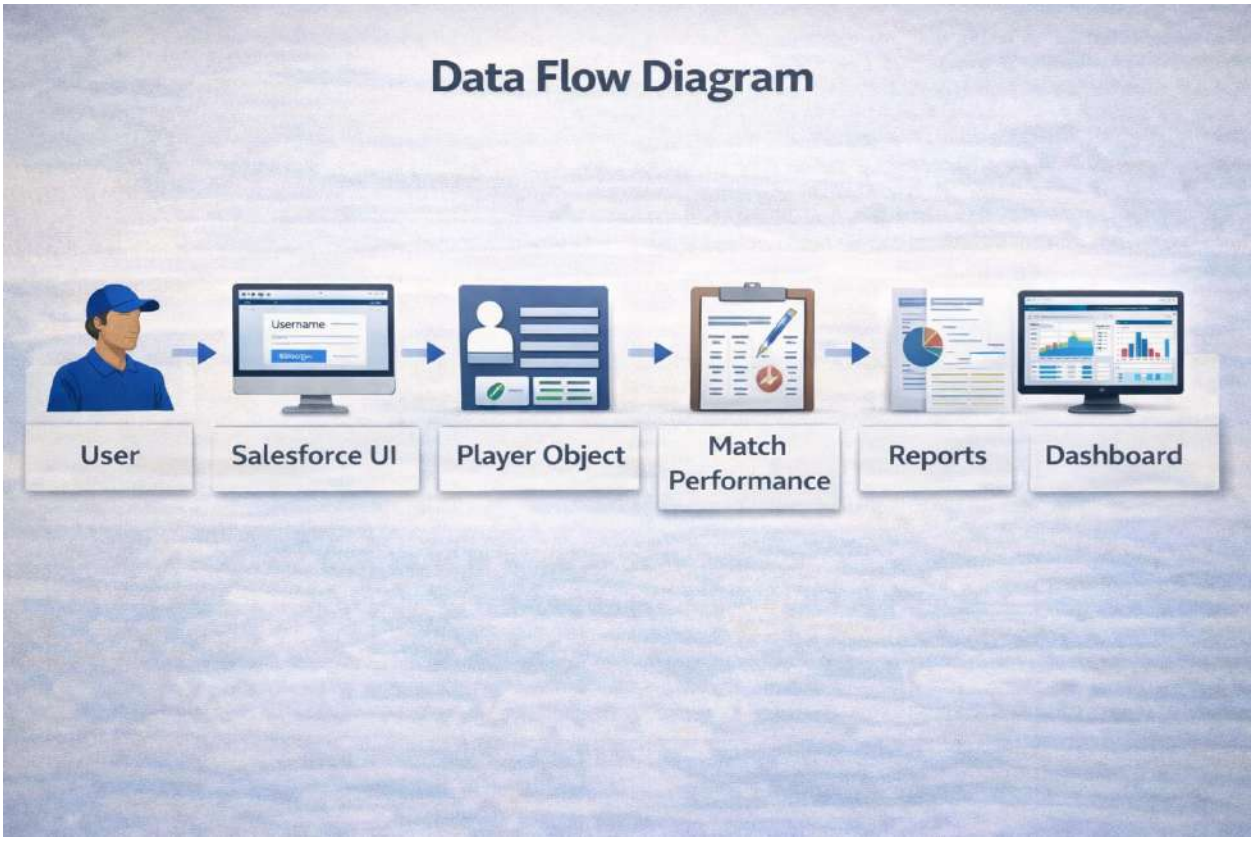

3.3 Data Flow Diagram

Data Flow

The CRICKSTATS system allows users to enter and manage player and match performance data through the Salesforce interface. The data is stored in Salesforce objects, processed for reports, and displayed on dashboards for analysis.

Flow:

User → Salesforce UI → Player Object → Match Performance → Reports → Dashboard

3.4 Technology Stack

The Technology Stack describes the technologies used to develop and operate the CRICKSTATS application. Each layer has a specific role, such as providing the user interface, managing data, automating tasks, generating analytics, and supporting cloud-based storage.

Layer	**Technology**
Frontend	Salesforce Lightning
Analytics	Reports & Dashboards
Automation	Salesforce Flows
Backend	Salesforce Objects
Database	Salesforce Cloud

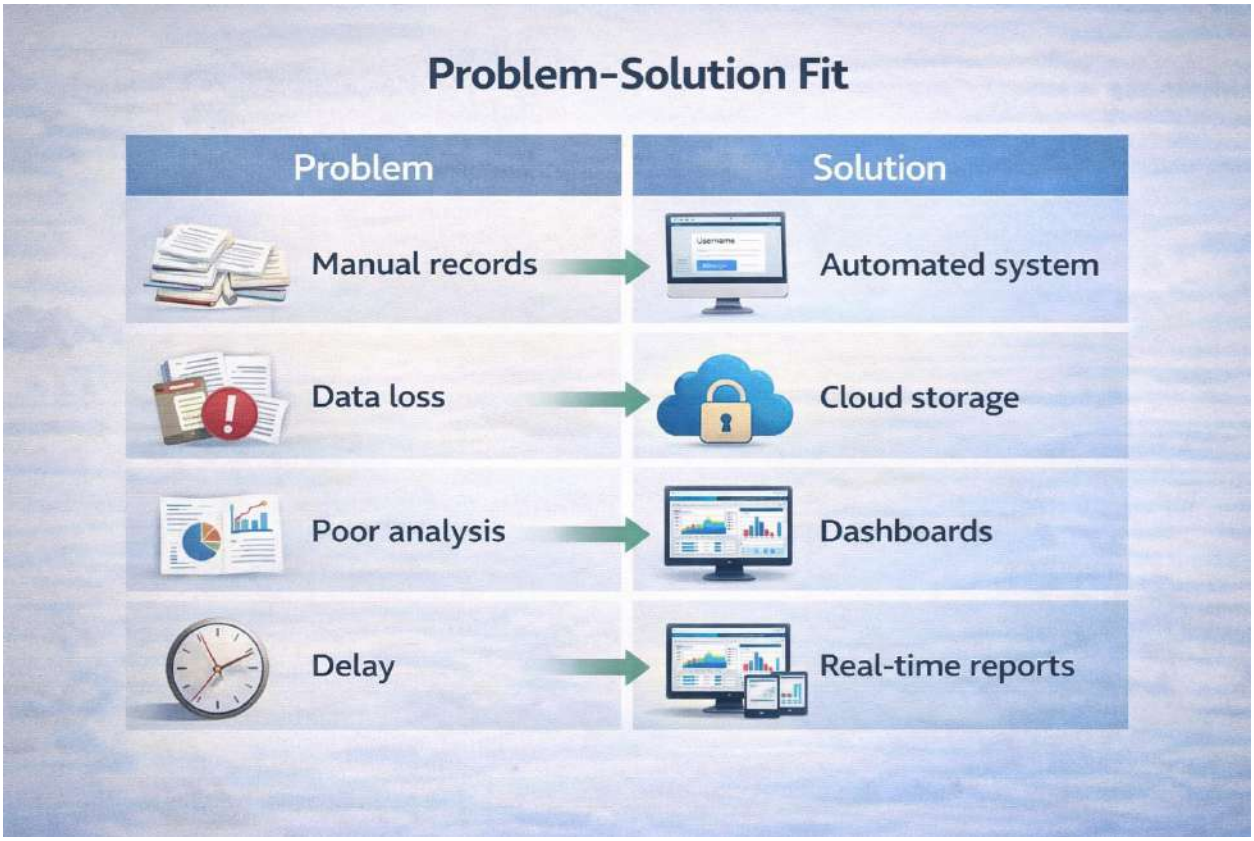

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The CRICKSTATS application is designed to solve common problems in cricket performance management by using the Salesforce platform. In traditional methods, player details and match statistics are often recorded manually, making the process slow and increasing the chances of mistakes. CRICKSTATS replaces this with a digital system that allows users to record, update, and manage information accurately.

The application also improves data security by storing all records in the Salesforce cloud, reducing the risk of losing important information. Instead of searching through multiple files, users can quickly access player profiles, match performances, and statistics from a single platform. Reports and dashboards provide instant performance analysis, helping coaches, managers, and analysts make better

decisions. By combining secure storage, automation, and real-time analytics, CRICKSTATS provides an efficient solution for modern cricket performance management.

4.2 Proposed Solution

Description

The CRICKSTATS system is designed to simplify cricket performance management by using Salesforce features that organize player data, automate routine tasks, and provide clear performance insights.

CRICKSTATS provides:

Custom Objects to maintain player profiles and match performance records in a structured format.

- Master-Detail Relationships to connect players with their corresponding match records.
- Roll-Up Summaries to automatically calculate runs, wickets, matches played, and other statistics.
- Lightning App to provide a simple and user-friendly interface for accessing and managing records.
- Automated Flows to reduce manual work by performing actions automatically based on defined conditions.
- Interactive Dashboards to present performance data through charts, graphs, and visual reports for quick analysis.

Key Features

- Centralized Database: Stores all player, match, and performance records in one secure location for easy management.

- Live Statistics: Displays updated player performance and match statistics whenever records are added or modified.

- Secure Access: Allows only authorized users to access and manage data through Salesforce security features.

- Scalable Design: Supports the addition of more players, teams, matches, and records without affecting system performance.

- Easy Reporting: Generates reports and dashboards quickly, making performance analysis simple for coaches and managers.

4.3 Solution Architecture

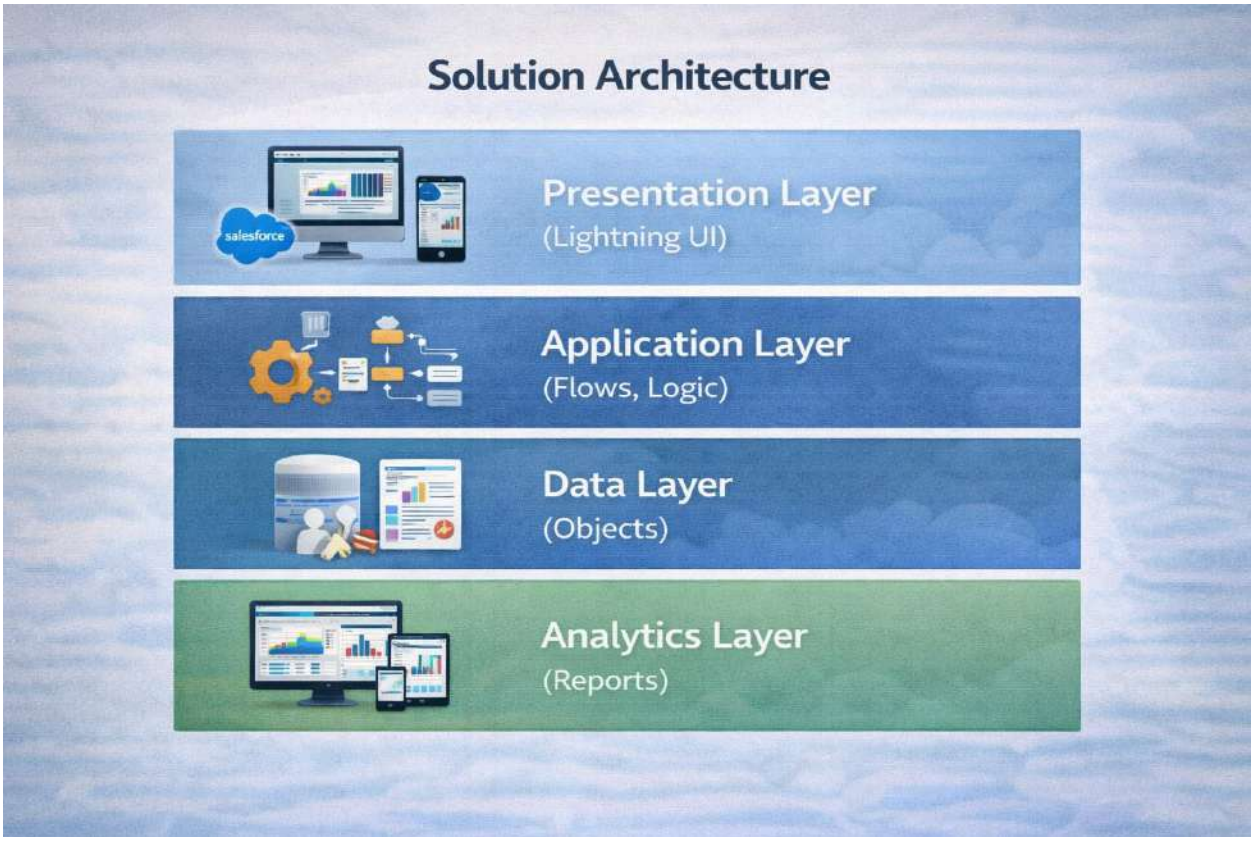

Architecture Layers

- Presentation Layer (Lightning UI): Provides the user interface where coaches, managers, and analysts can view, enter, and update player and match information.

- Application Layer (Flows, Logic): Handles business processes and automation by executing Salesforce Flows and application logic for different user actions.

- Data Layer (Objects): Stores player details, match performance records, and related information using Salesforce Objects and their relationships.

- Analytics Layer (Reports): Processes stored data to generate reports, charts, and dashboards for performance analysis and decision-making.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

The CRICKSTATS project follows an Agile development approach. The project is divided into small sprints, and each sprint focuses on completing a set of features. This method helps the team develop, test, and improve the application step by step.

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

The CRICKSTATS project follows an Agile methodology. The work is divided into four sprints, where each sprint delivers a specific set of features. Story Points are used to estimate the effort required for each task.

Sprint	Epic	User Story No.	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Player Management	USN-1	As an admin, I want to create Player records so that player information can be stored.	3	High	Member1
Sprint-1	Team Management	USN-2	As an admin, I want to create Team records so that players can be assigned to teams.	3	High	Member2
Sprint-2	Match Management	USN-3	As a coach, I want to enter player performance after each match so that statistics are updated.	5	High	Member3
Sprint-2	Performance Entry	USN-4	As a coach, I want to enter player performance after each match so that statistics are updated.	5	High	Member4
Sprint-3	Flow Automation	USN-5	As a system, I want to calculate total runs and wickets automatically so that manual work is reduced.	5	High	Member1
Sprint-3	Validation Rules	USN-6	As a system, I want to validate score entries so that incorrect data is prevented	3	Medium	Member2
Sprint-4	Reports	USN-7	As a coach, I want performance reports so that I can analyze player results.	3	Medium	Member3
Sprint-4	Dashboard & Testing	USN-8	As a manager, I want dashboards and tested features so that the application is ready for use.	5	High	Member4

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	18	5 Days	02 Jan 2026	06 Jan 2026	17	07 Jan 2026
Sprint-2	22	7Days	08 Jan 2026	14 Jan 2026	22	14 Jan 2026
Sprint-3	16	5Days	16 Jan 2026	20 Jan 2026	15	21 Jan 2026
Sprint-4	24	8Days	22 Jan 2026	29 Jan 2026	24	29 Jan 2026

6. Project Development Phase:

Project Flow

Milestone 1 : Creation of developer account
Milestone 2 : Object Creation
Milestone 3 : Tabs
Milestone 4 : The Lightning App
Milestone 5 : Fields & Relationships
Milestone 6 : Roll-up Summary
Milestone 7 : Flows

6. Project Development Phase:

Project Flow

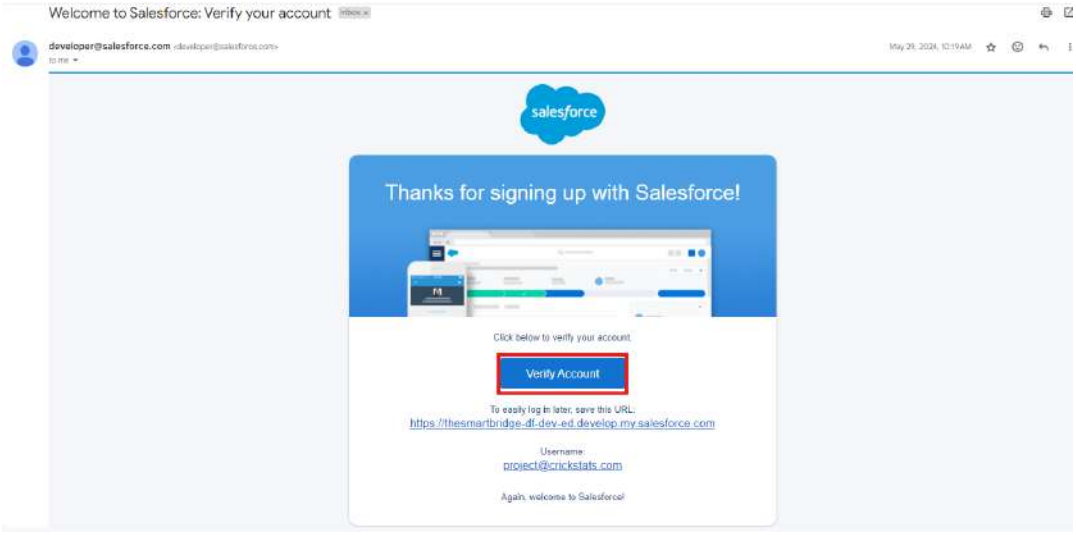

Milestone 1 : Creation of developer account
Milestone 2 : Object Creation
Milestone 3 : Tabs
Milestone 4 : The Lightning App

Milestone 5 : Fields & Relationships
Milestone 6 : Roll-up Summary
Milestone 7 : Flows

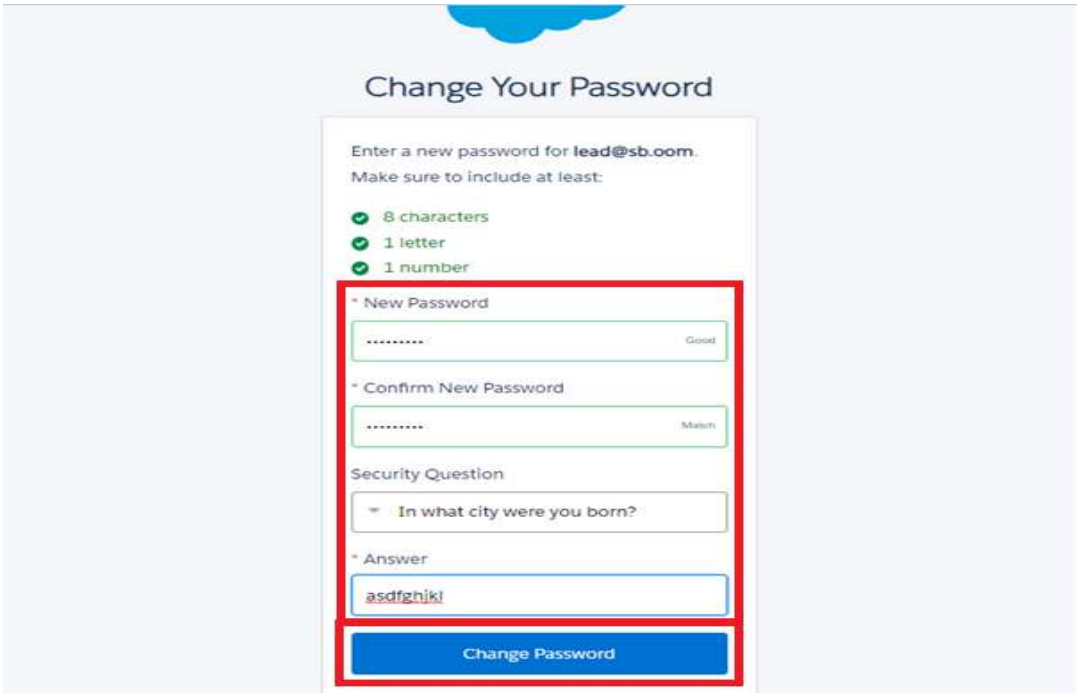

Activity 2: Account Activation :

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

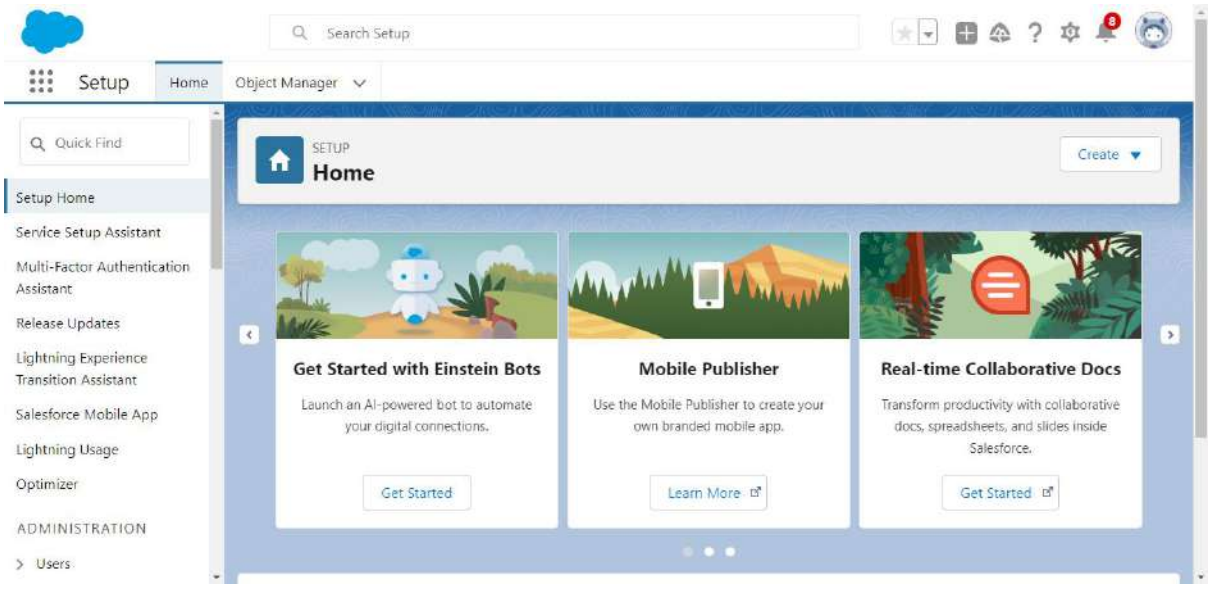

2. Click on Verify Account.

3. Give a password and answer a security question and click on change password.

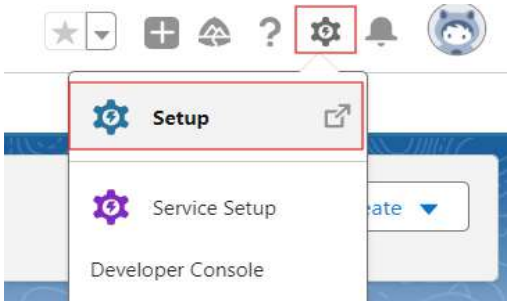

4. Then you will redirect to your salesforce setup page.

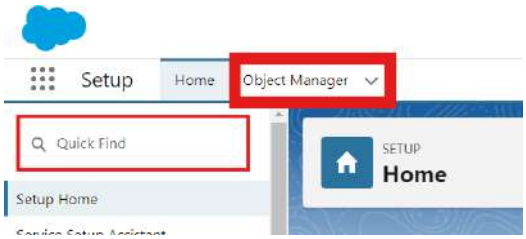

Milestone 2 - Object Creation

Activity 1 : Player Object

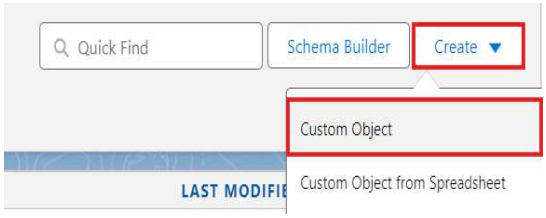

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.

2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.

3. On the Object Manager page, click Create | Custom Object.

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
    - **Label** : Player
    - **Plural Label** : Players
    - Enter Record Name Label and Format
        Record Name : Player Name
        Data Type **:** Text
    - **In Optional features :** check the boxes for Allow Reports | Allow Activities | Track Field History.
    - **Search Status :** check the box for Allow Search.
    - Save

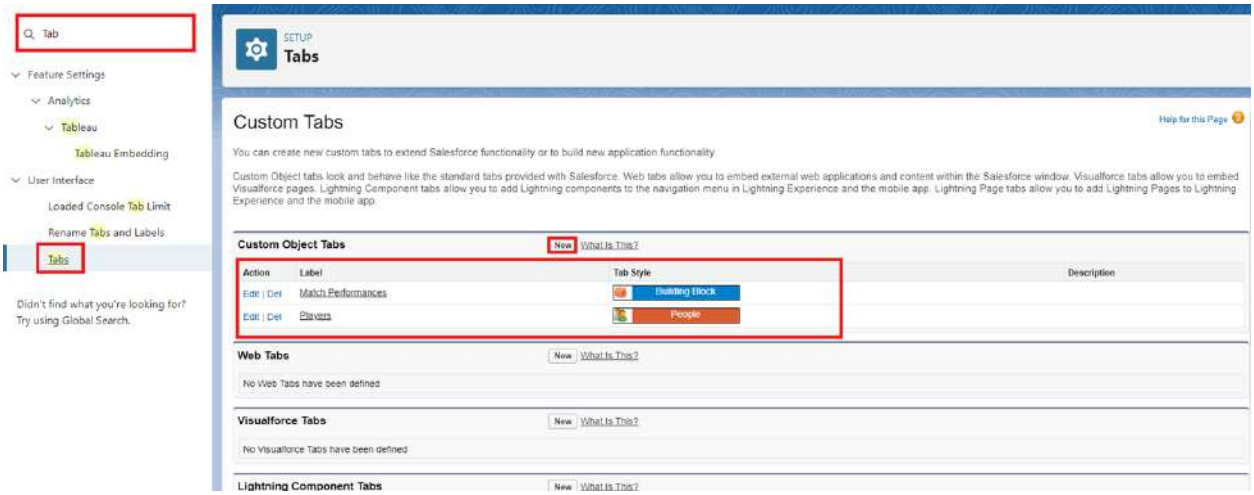

Activity 2 : Match Performance Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
    - **Label** : Match Performance
    - **Plural Label** : Match Performances
    - Enter Record Name Label and Format
        Record Name : Customer Account Name
        Data Type **:** Text
    - **In Optional features :** check the boxes for Allow Reports | Allow Activities | Track Field History.
    - **Search Status :** check the box for Allow Search.
    - Save.

Milestone 3 - Tabs

Activity 1 : Custom tabs creation

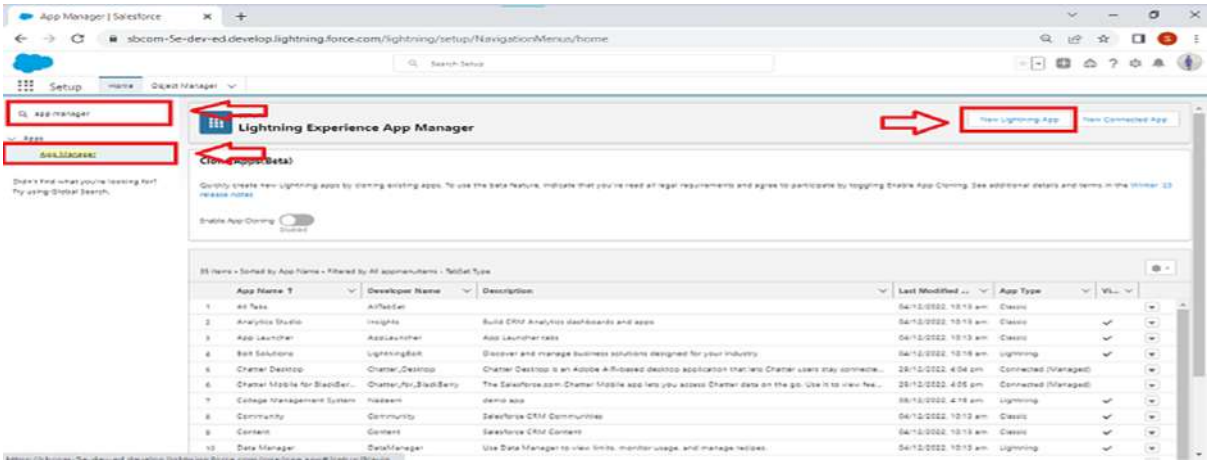

1. Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab)
2. Select Object(Player) → Select the tab style → Next (Add to profiles page) keep it as default → Next (Add to Custom App) uncheck the include tab .
3. Make sure that the Append tab to users' existing personal customizations is checked.
4. Click save.
5. Repeat the same steps for Match Performances.

Milestone 4 - The Lightning App

Activity 1 : Create a lightning app

1. Go to setup page → search “app manager” in quick find → select “app manager” → click on New lightning App.

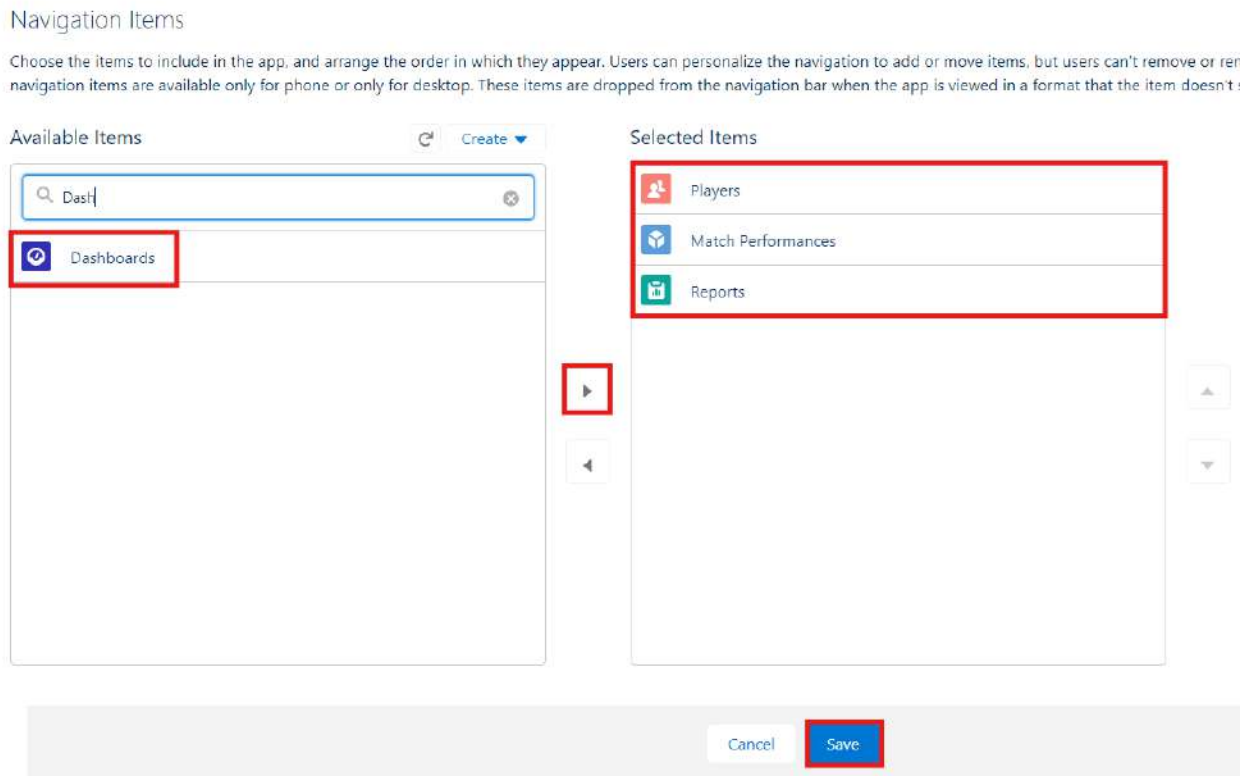

2. Fill the app name in app details and branding as follow
   App Name : CRICKSTATS
   Developer Name : Auto Populates
   Add image optional (if you want to give any image you can otherwise not mandatory) - Add Primary color Hex or leave it to default.
   Then click Next.

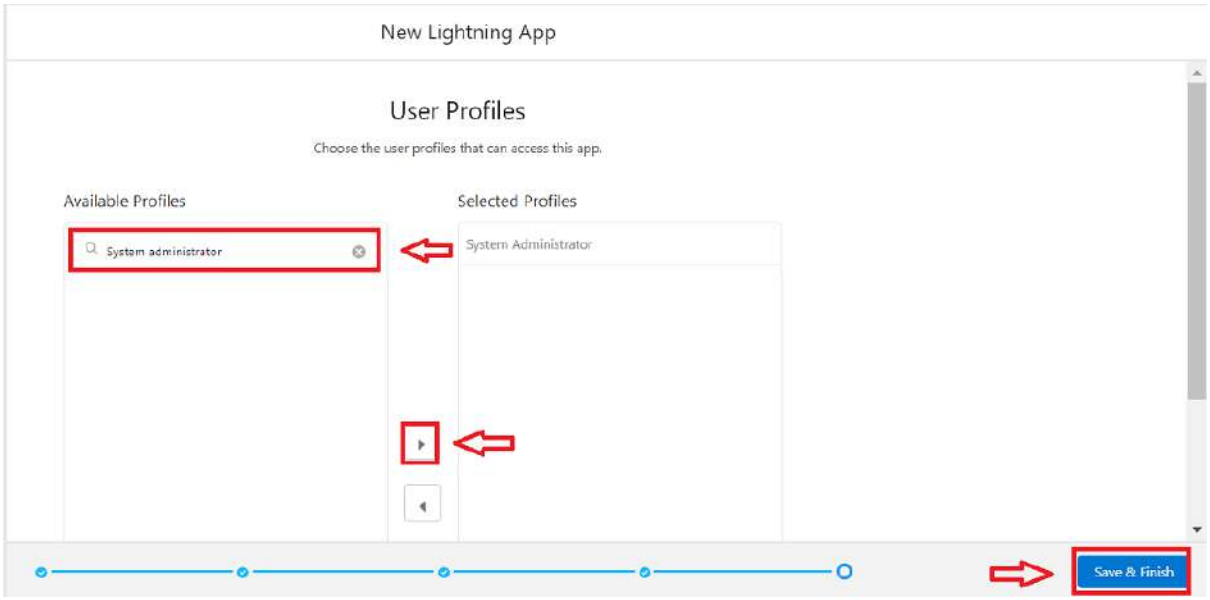

3. In App options
   Navigation style : Standard navigation
   Setup experience : setup
   Supporters form factors : Desktop and phone
   Then click Next

4. In Utility items
   Utility Bar alignment : Default
   Then click Next.

5. Navigation items
   Select the created Custom Objects and required standard objects
   - Players
     Match Performances
     Reports
     Dashboards

6. To Add User Profiles : System Administrator

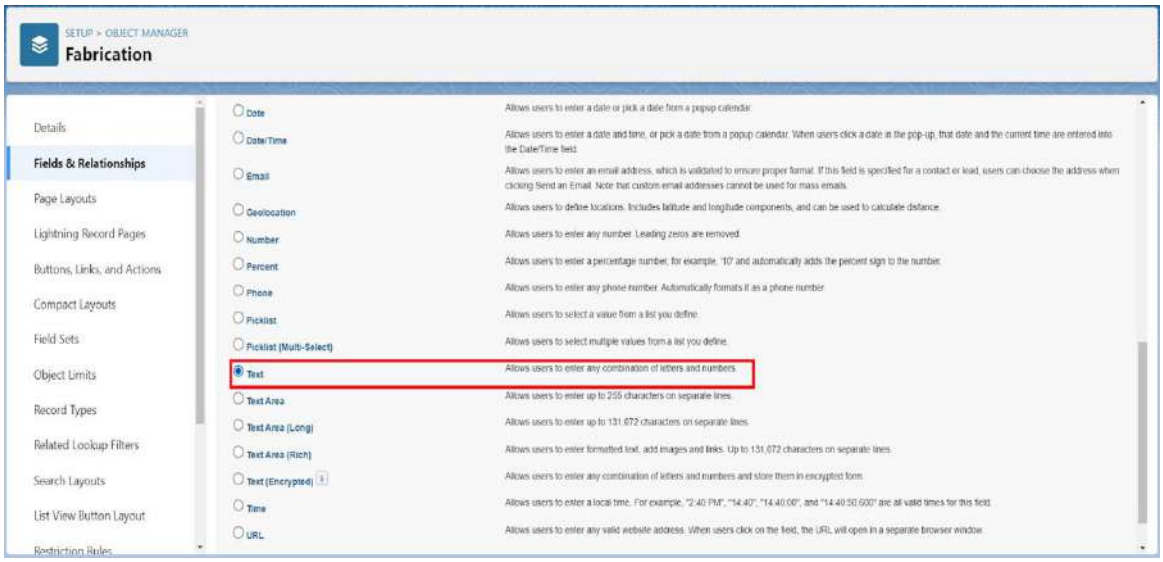

7. Click Save & Finish.

Milestone 5 : Fields & Relationships

Activity 1 : Create Custom fields for Player object

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. From the object manager page, In the Quick Find box, Search for the custom object you just created : **Player**
4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn't already exist.
6. Next, choose a data type as Text. Choosing a data type helps you format the field input.

7. Click on next.

8. Data Type : **Text**
   Field Label: Player Name
   Field Name : Auto Populates
   Length : 50
   Click on Next → Next → Save and new.

9. Repeat the Same steps for remaining fields

- Data Type : **Text**
  Field Label: Player Number
  Field Name : Auto Populates
  Length : 3
  Click on Next → Next → Save and new.

- Data Type : **Rich Text Area**
  Field Label : Profile Picture
  Field Name : Auto Populates
  Click on Next → Next → Save and new.

- Data Type : **Date**
  Field Label : Date of Birth
  Field Name : Auto Populates
  Click on Next → Next → Save and new.

- Data Type : **Picklist**
  Field Label : Role
  Field Name : Auto Populates
  Value : Enter value, with each value separated by a new line.
  Batsman
  Bowler
  Batsman & Wicket Keeper
  All Rounder

- Data Type : **Picklist**
  Field Label : Batting Style
  Field Name : Auto Populates
  Value : Enter value, with each value separated by a new line.
  Right- Handed
  Left - Handed
  Click on Next → Next → Save and new.

- Data Type : **Picklist**
  Field Label : Bowling Style
  Field Name : Auto Populates
  Value : Enter value, with each value separated by a new line.
  Right-Arm Fast
  Left-Arm Fast
  Right-Arm Medium

Left-Arm Medium
Right-Arm Spin
Left-Arm Spin

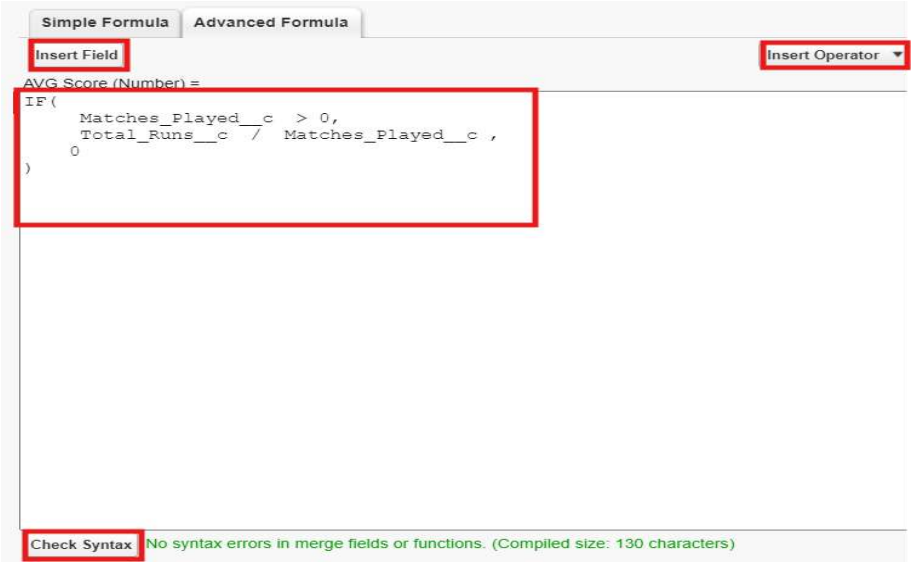

Click on Next → Next → Save and new.

- Data Type : **Picklist**
  Field Label : Nationality
  Field Name : Auto Populates
  Value : Enter value, with each value separated by a new line.
  Australia
  Bangladesh
  England
  India
  New Zealand
  Pakistan
  South Africa
  Sri Lanka
  West Indies
  Afghanistan
  Zimbabwe
  Ireland
  Scotland
  Netherlands
  United Arab Emirates
  Nepal
  United States of America

  Click on Next → Next → Save and new.

- Data Type : **Picklist**
  Field Label : Team
  Field Name : Auto Populates
  Value : Enter value, with each value separated by a new line
  Chennai Super Kings (CSK)
  Delhi Capitals (DC)
  Kolkata Knight Riders (KKR)
  Mumbai Indians (MI)
  Punjab Kings (PBKS)
  Rajasthan Royals (RR)
  Royal Challengers Bangalore (RCB)
  Sunrisers Hyderabad (SRH)
  Gujarat Titans (GT)
  Lucknow SuperGiants (LSG)
- Data Type : **Formula**

Field Label : AVG Score
Field Name : Auto Populates
Formula Return : **Number**
Formula : IF(
Matches_Played__c > 0,
Total_Runs__c / Matches_Played__c ,
0
)

Click on Next → Next → Save & New.

- Data Type : **Lookup Relationship**
  Related To : Match Performance
  Field Label : Match Performance
  Field Name : Auto Populates
  Click on Next → Next → Save.

Activity 2 : Create Custom fields for Match Performance object.

1. Data Type : **Text**
   Field Label: Match Performance Name
   Field Name : Auto Populates
   Length : 80
   Click on Next → Next → Save and new.

2. Data Type : **Checkbox**
   Field Label: Player of the Match
   Field Name : Auto Populates

Click on Next → Next → Save and new.

3. Data Type : **Picklist**
   Field Label: Match Result
   Field Name : Auto Populates
   Value : Enter value, with each value separated by a new line
   WON
   LOST
   DRAW
   Click on Next → Next → Save and new.

4. Data Type : **Number**
   Field Label: Runs Scored
   Field Name : Auto Populates
   Click on Next → Next → Save and new.

5. Data Type : **Number**
   Field Label: Balls Faced
   Field Name : Auto Populates
   Click on Next → Next → Save and new.

6. Data Type : **Number**
   Field Label: Fours
   Field Name : Auto Populates
   Click on Next → Next → Save and new.

7. Data Type : **Number**
   Field Label: Sixes
   Field Name : Auto Populates
   Click on Next → Next → Save and new.

8. Data Type : **Number**
   Field Label: Overs Bowled
   Field Name : Auto Populates
   Click on Next → Next → Save and new.

9. Data Type : **Number**
   Field Label: Wickets Taken
   Field Name : Auto Populates
   Click on Next → Next → Save and new.

10. Data Type : **Number**
    Field Label: Runs Conceded
    Field Name : Auto Populates
    Click on Next → Next → Save and new.

11. Data Type : **Number**
    Field Label: Maiden Overs
    Field Name : Auto Populates
    Click on Next → Next → Save and new.

12. Data Type : **Number**
    Field Label: Stumpings
    Field Name : Auto Populates
    Click on Next → Next → Save and new

13. Data Type : **Number**
    Field Label: Catches
    Field Name : Auto Populates
    Click on Next → Next → Save and new.

14. Data Type : **Master - Detail Relationship**
    Related To : Player
    Field Label : Player
    Field Name : Auto Populates
    Click on Next → Next → Save.

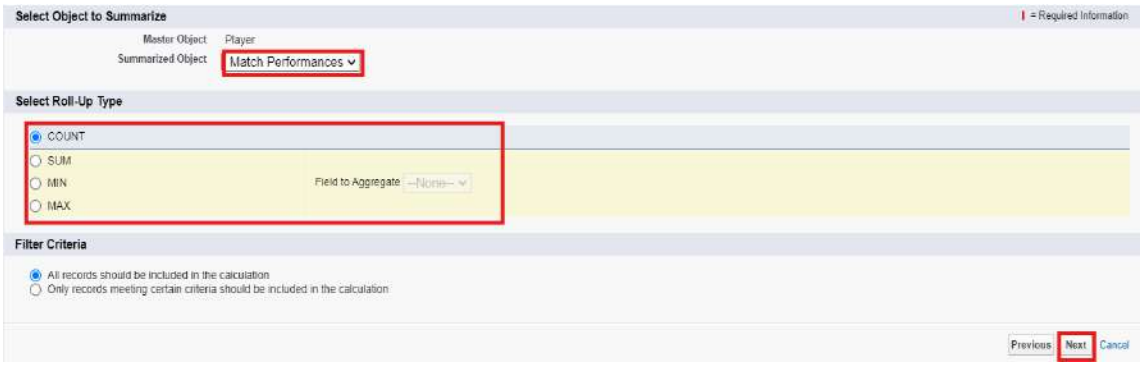

Milestone 6 : Roll-up Summary

Activity 1 : Create Roll-up Summary for Player object.

Note :- Roll-up Summary can only be created on parent object in Master- Detail Relationship.

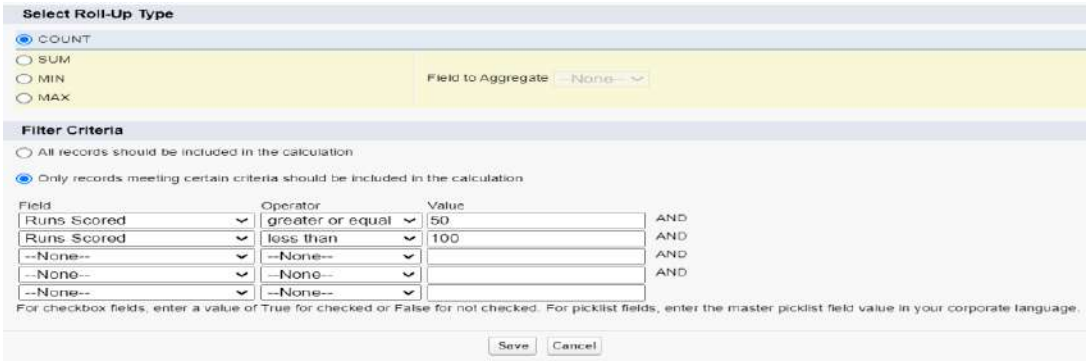

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. From the object manager page, In the Quick Find box, Search for the custom object you just created : **Player**

4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn't already exist. Click Next,
6. Choose a data type as **Roll-up Summary**. Click Next.
   Field Label: Matches Played
   Field Name : Auto Populates
   Summarized Object : Match Performances
   Select Roll-up Type : COUNT

   Filter Criteria : All records should be included in the calculation.
   Click on Next → Next → Save and new.

- Data Type : Roll-up Summary
  Field Label: Number of 50's
  Field Name : Auto Populates
  Summarized Object : Match Performances
  Select Roll-up Type : COUNT
  Filter Criteria : Only records meeting certain criteria should be included in the calculation.
  Click on Next → Next → Save and new.

- Data Type : Roll-up Summary
  Field Label: Number of 100’s
  Field Name : Auto Populates
  Summarized Object : Match Performances
  Select Roll-up Type : COUNT
  Filter Criteria : Only records meeting certain criteria should be included in the calculation.
  Click on Next → Next → Save and new.

- Data Type : Roll-up Summary
  Field Label: Total 4’s
  Field Name : Auto Populates
  Summarized Object : Match Performances
  Select Roll-up Type : SUM
  Field To Aggregate : Fours
  Filter Criteria : All records should be included in the calculation.
  Click on Next → Next → Save and new.

- Data Type : Roll-up Summary
  Field Label: Total 6’s
  Field Name : Auto Populates
  Summarized Object : Match Performances
  Select Roll-up Type : SUM
  Field To Aggregate : Sixes
  Filter Criteria : All records should be included in the calculation.
  Click on Next → Next → Save and new.

- Data Type : Roll-up Summary
  Field Label: Total Runs
  Field Name : Auto Populates

Summarized Object : Match Performances
Select Roll-up Type : SUM
Field To Aggregate : Runs Scored
Filter Criteria : All records should be included in the calculation.
Click on Next → Next → Save and new.

- Data Type : Roll-up Summary
  Field Label: Total Overs
  Field Name : Auto Populates
  Summarized Object : Match Performances
  Select Roll-up Type : SUM
  Field To Aggregate : Overs Bowled
  Filter Criteria : All records should be included in the calculation.
  Click on Next → Next → Save and new.

- Data Type : Roll-up Summary
  Field Label: Total Wickets
  Field Name : Auto Populates
  Summarized Object : Match Performances
  Select Roll-up Type : SUM
  Field To Aggregate : Wickets Taken
  Filter Criteria : All records should be included in the calculation.
  Click on Next → Next → Save and new.

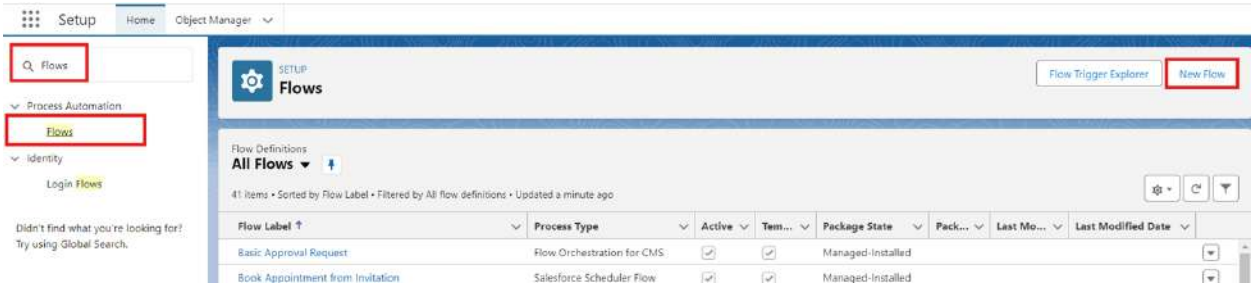

- Data Type : Roll-up Summary
  Field Label: Total Stumpings
  Field Name : Auto Populates
  Summarized Object : Match Performances
  Select Roll-up Type : SUM
  Field To Aggregate : Stumpings
  Filter Criteria : All records should be included in the calculation.
  Click on Next → Next → Save and new.

- Data Type : Roll-up Summary
  Field Label: Total Catches
  Field Name : Auto Populates
  Summarized Object : Match Performances
  Select Roll-up Type : SUM
  Field To Aggregate : Catches
  Filter Criteria : All records should be included in the calculation.
  Click on Next → Next → Save and new.

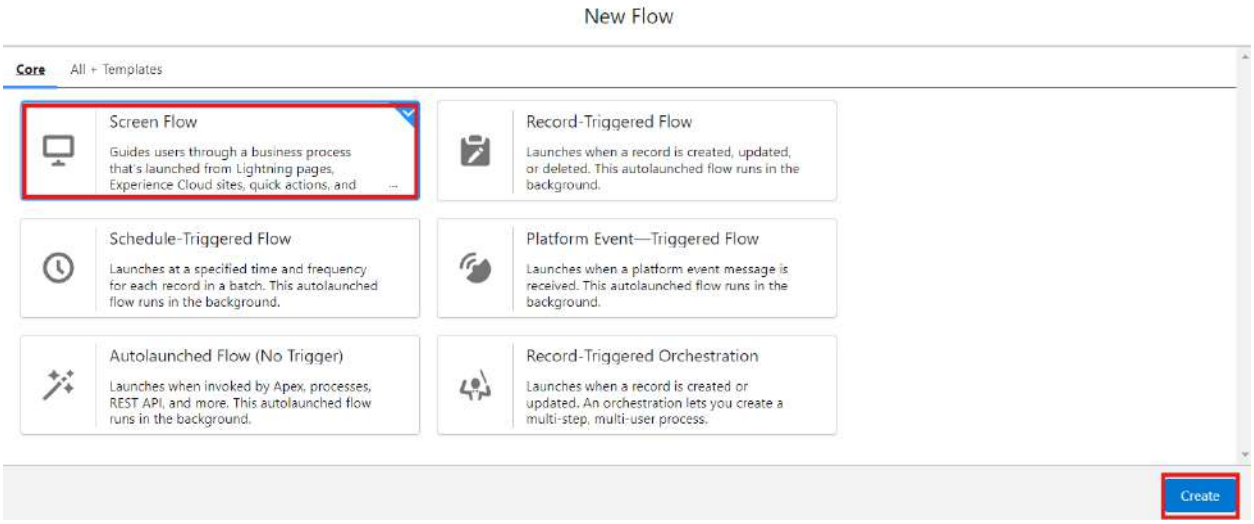

Milestone 7 : Flows

Activity 1 : Screen Flow

1. Go to setup, Type Flow in quick find box → Click on the Flow and Select the New Flow.

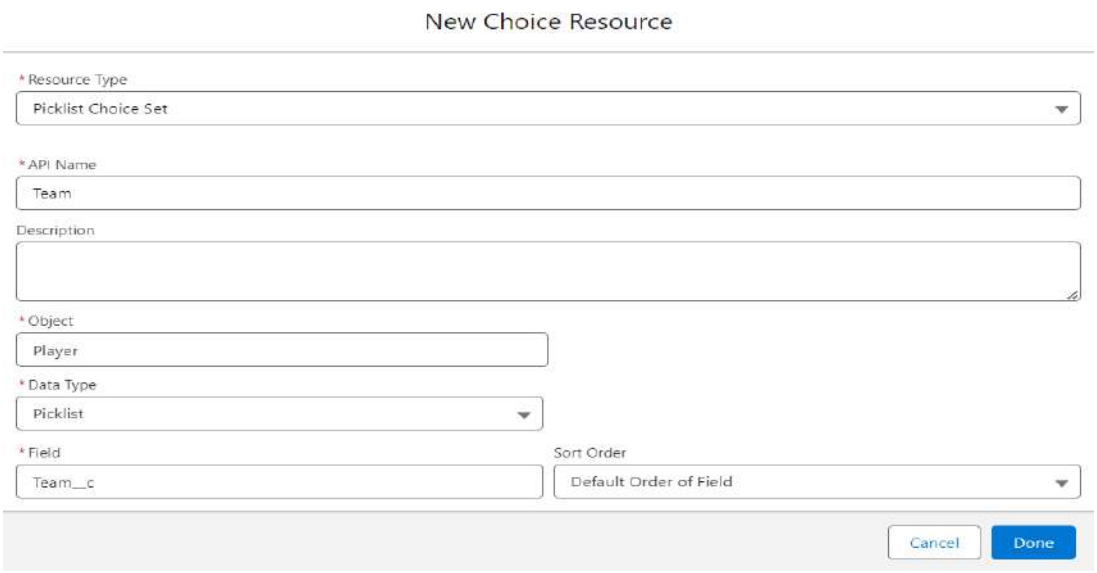

2. Select Screen Flow and click Create.

3. Click (+) Icon on the flow builder and Select **Screen Component.**
   Label : Players screen
   API : Players_screen
   Select the **Picklist** component and place it on the screen.
   Label : Team
   API : Team
   From Component Pane on the left side select **Component Type** : Picklist
   Data Type : Text
   Choice : Click New Choice Resources
   Resource Type : Picklist Choice Set

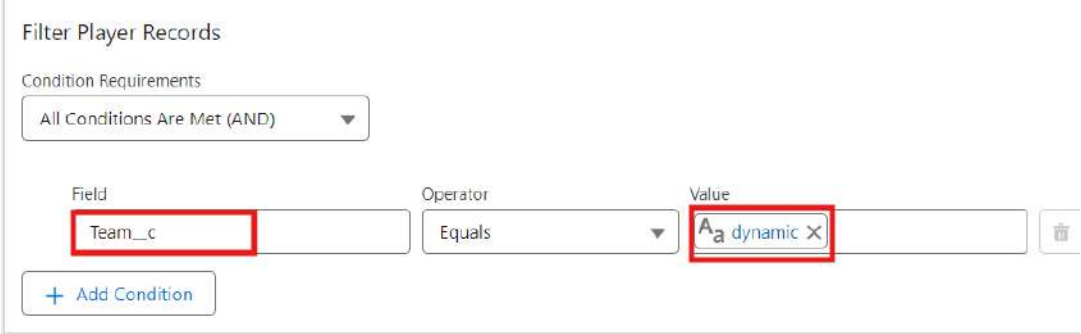

API Name : Team
Object : Player
Data Type : Picklist
Field : Team
Click Done.

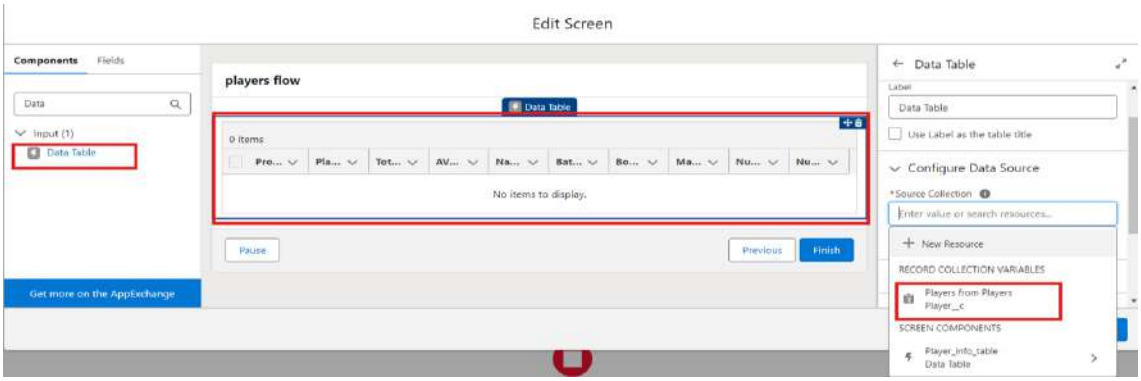

4. Click (+) Icon on the flow builder and Select **Get Records Component.**
   Label : Players
   API Name : Players
   Object : Player
   Filter player records :
   Field : Team
   Operator : Equals
   Value : Click New Resource

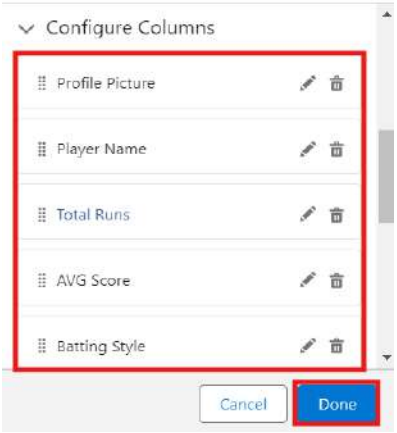

Resource Type : Variable
API Name : Dynamic
Data Type : Text
Default Value : Screen component : Team (Picklist)

5. Click (+) Icon on the flow builder and Select **Screen Component.**
   Label : Player_info
   API Name : Player_info
   From Component Pane on the left side select **Component Type :** Data table
   API Name : Player_info_table
   Label : Data Table
   Configure Data Source : Source Collection : Players from players (Player__c)

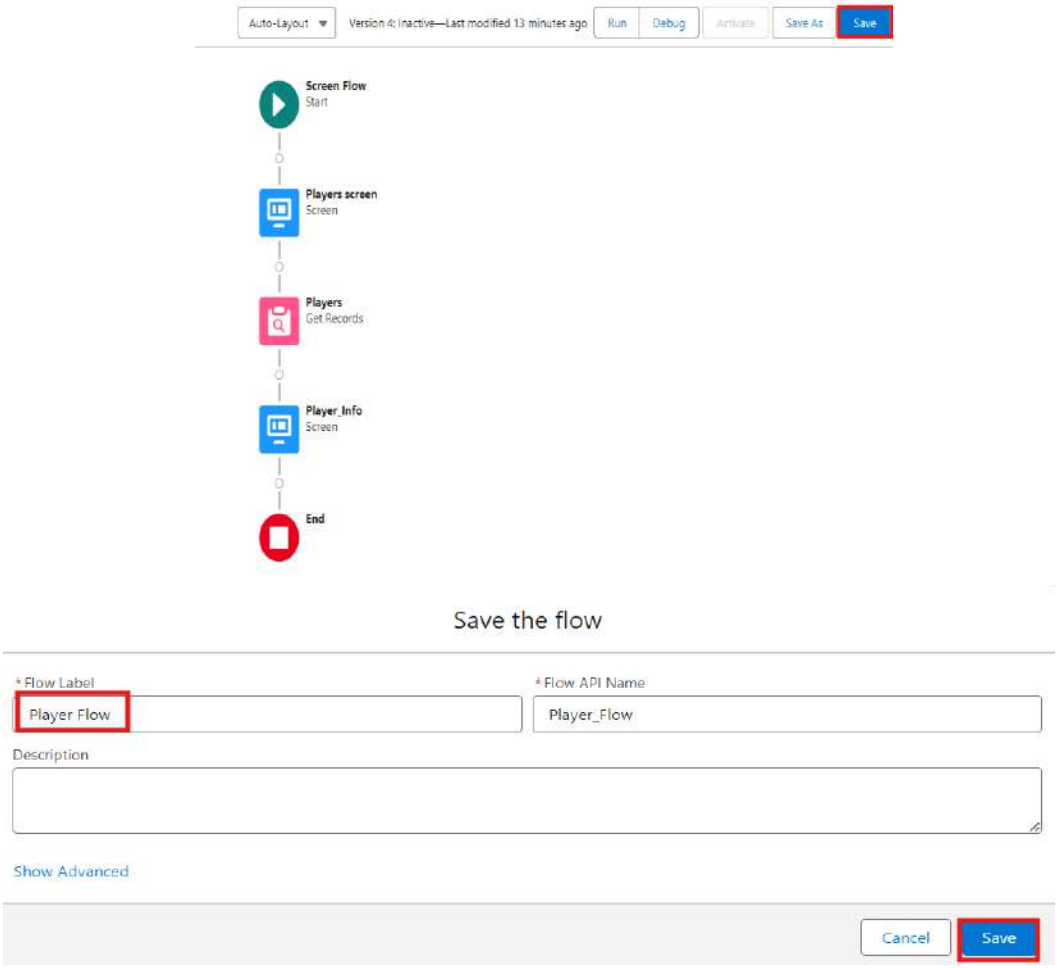

In Configure Columns : Add all the required Columns
Profile Picture | Player Name | Total Runs | AVG Score | Batting Style | Bowling Style | Matches Played | Number of 50's | Number of 100's
Click Done.

Click Save.

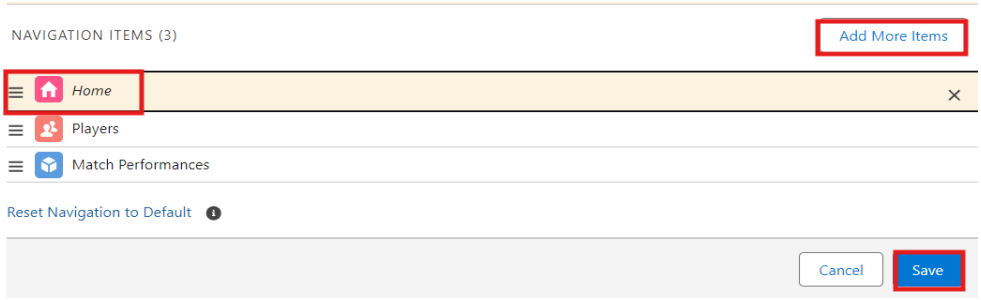

Flow Label : Player Flow

Flow API Name : Player_Flow

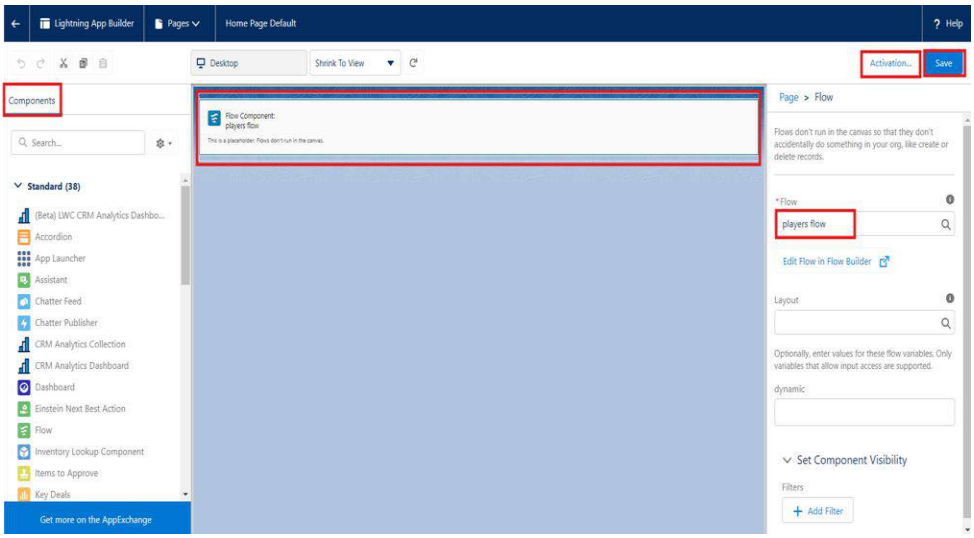

Activity 2 : Flow on Home Page

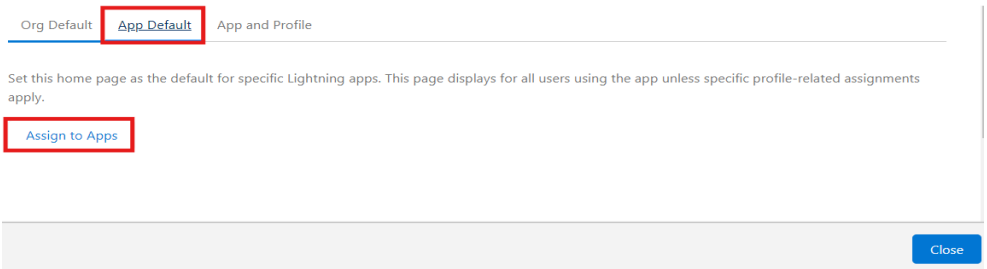

1. On your CRICKSTATS Application on the top right of the Navigation Bar click on **Personalize your nav bar icon (Pencil Icon)** and Add Home Page and click Save.

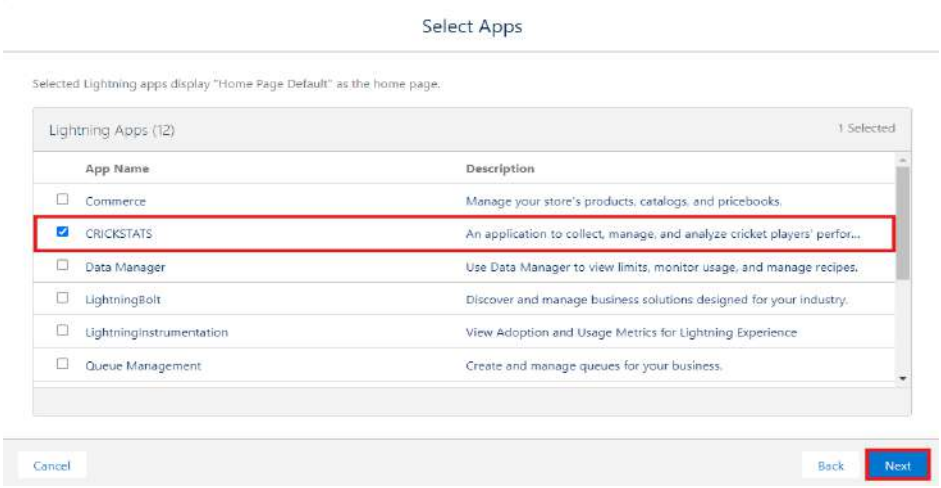

2. Remove all other components and Add **FLOW** component from the standard components on the left side.
3. **Flow** : Players Flow

4. Click **Save** and **Activation**.
5. Click on **App Default** and select **Assign to Apps.**

6. Select **CRICKSTAS** App and Click **Next** and then click **Save**.

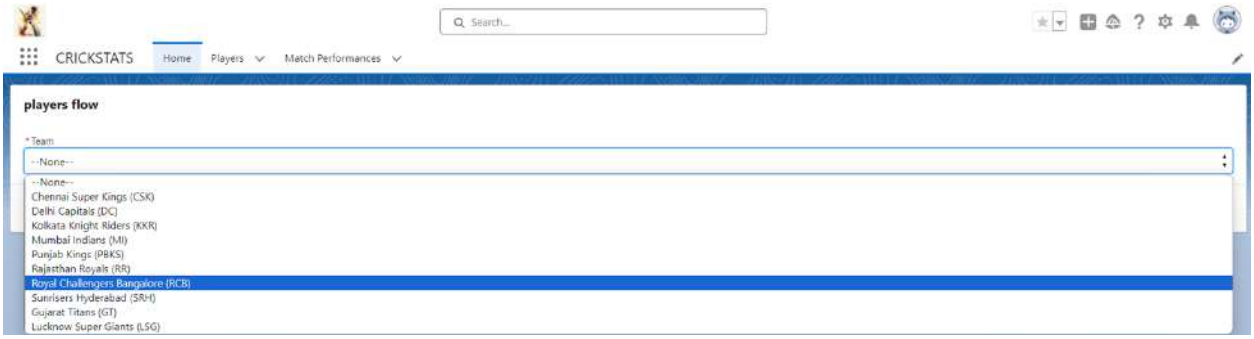

7. FUNCTIONAL & PERFORMANCE TESTING

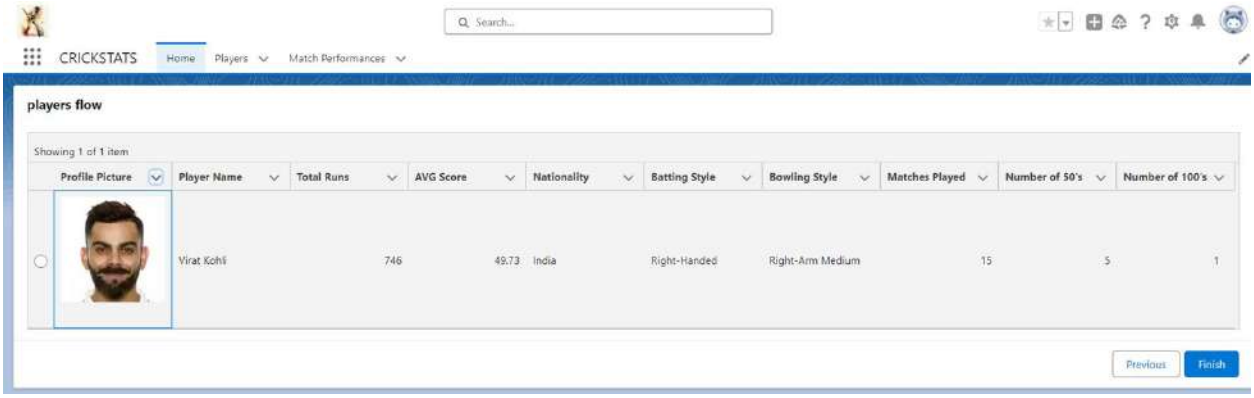

During the testing phase, screenshots were captured from the Salesforce Lightning user interface to verify the correct functioning of all implemented features in the CRICKSTATS system. These include record creation for Player and Match Performance objects; validation rule checks for mandatory fields, score limits, and input constraints; verification of record type behavior for Domestic and International match categories; and flow execution for automatic updating of player statistics and data consistency. The functionality of roll-up summary fields was also tested to ensure accurate calculation of total runs, wickets, averages, and performance metrics.

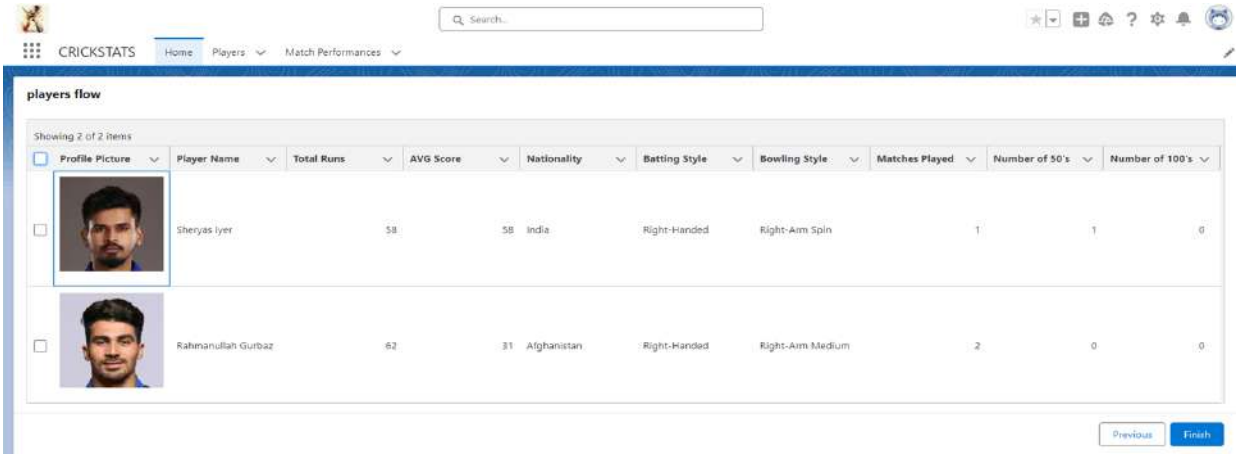

In addition, system performance was evaluated by monitoring response time during data entry, report generation, and dashboard loading. The application was tested under multiple user interactions to ensure stable performance without delays. Screenshots of generated reports and interactive dashboards were documented to confirm accurate data visualization, real-time updates, and reliable performance tracking. These testing activities ensured that the CRICKSTATS platform met both functional and performance requirements and was ready for deployment.

NOTE : Enter some records in the Player Object and Match Performance Object to get the results.

1. Select one Team from the Picklist and Click **Next**.

8. ADVANTAGES & DISADVANTAGES

Advantages:

Easy Player Performance Tracking

1. Centralized Data Management
2. Reduces Manual Work
3. Automatic Calculations
4. Reports and Dashboards

Disadvantages:

Requires a Salesforce License

- ➉ Requires Internet Connection
- ➉ Limited Customization in Some Areas
- ➉ Depends on Salesforce Platform
- ➉ Requires Basic Salesforce Knowledge

9. Conclusion:

CRICKSTATS successfully implements a cloud-based cricket player performance tracking system using Salesforce. The system helps to manage player and match data efficiently, reduces manual work, improves reporting accuracy, and provides useful performance insights.

The project demonstrates the practical application of **SDLC, Agile methodology, Salesforce CRM, Objects, Fields, Relationships, Roll-Up Summaries, and Flows**. It provides a simple and effective solution for tracking and analyzing cricket player

performance.

10. FUTURE SCOPE

Mobile Application Integration

A mobile application can be integrated to access the system easily from smartphones.

- **AI-Based Performance Prediction**

  AI can be used to predict player performance based on previous match statistics.

- **Video Analysis Integration**

  Match videos can be integrated for detailed player performance analysis.

- **Player Ranking System**

  A ranking system can be developed to compare player performance.

- **Public Statistics Portal**

  A public portal can be developed to display selected player and match statistics.

- **Multi-League Support**

  The system can be extended to support multiple cricket leagues and tournaments

11. APPENDIX

Salesforce Objects and Fields

Details of the objects and fields created for the CRICKSTATS application.

- **Manual Match Statistics**

  Sample match statistics used for entering and testing player performance data.

- **Flow Configurations**

  Details of the Salesforce Flows created to automate different processes in the application.
